

NATIONAL EQUIPMENT IDENTITY REGISTER(EIR) SYSTEM

*Integrate with the national database of stolen handsets
and provide the blocking service to your customers*

- ◆ Phone stealing is negative for the market: help suppressing stealing by making it ineffective for the thieves, the handset will be blocked for any usage with another operator.
- ◆ This service is wanted and its cost may be covered by a small monthly charge to the customers.
- ◆ The National EIR system is the only efficient dissuasive method as it blocks stolen phones from being used on all GSM networks of the same country.

- ◆ Very simple administration with PC connected to the national EIR server: no equipment needed in the GSM networks.
- ◆ The National EIR is accessible through a secure browser by all the operators which may:
 - Register the loss or stealing of a handset
 - Display those which they have declared stolen

All MSCs support the CHECK-IMEI triggering for
UPDATE LOCATION, SMS or Voice Calls. (as you configure)
The MSCs will query the National EIR to bar immediately stolen phones.
